

Project 1

Part 2: Modelling traffic load

You have delivered a pipeline for modelling of traffic load. When defining that pipeline, you have made several choices. You will probably have to make more choices, and you might have to go back and change some previous choices. Make sure that all of this is recorded in your daily reflection sheets.

For part 2 of the project you are working towards **a presentation of 10 slides**. Our proposed format is as follows:

- Slides 1-3: Data visualization and descriptions (figures, tables)
- Slide 4: Pipeline / flowchart showing data wrangling and preparations for modelling.
- Slide 5: *Reflections*: What is the goal with the data analysis, and how is the final goal related to your thoughts in Part 1
- Slides 6-8: Model formulation, results and interpretation
- Slide 9: A (tabloid) newspaper headline, with a figure and a brief statement, presenting a key finding from your model
- Slide 10: A timeline of the project work which documents you progress. Piece together the reflection notes and draw a timeline addressing the main aspects from Part 1 and 2.

You can decide to use somewhat more/less slides per theme but you have to answer to all points above within 10 slides.

Note:

The presentation should be coherent, this includes the visualizations.

The presentation will be evaluated against your Part 1 hand-in, so make sure to document and argue for major deviations from your initial plan.

Not part of the final evaluation, but an extra 5 points earned on the first Friday following the project deadline (October 9th): 5-10 minutes presentations (3 groups together).
